apree health

10 minutes is all it takes to execute an attack in the cloud after discovering an exploitable target. Outpacing attackers in the cloud requires security teams to meet the 5/5/5 Benchmark. 5/5/5 means 5 seconds to detect, 5 minutes to triage, and 5 minutes to respond to threats. Sysdig helps Google Cloud customers get closer to meeting this benchmark's expectations, securing their cloud innovation.

In the cloud, every second counts. Google Cloud users must protect their business without slowing it down. Sysdig secures Google Cloud and container services in real-time with threat detection built on open source Falco. We correlate signals across workloads, identities, and services in Google Cloud to uncover hidden attack paths and prioritize real risk.
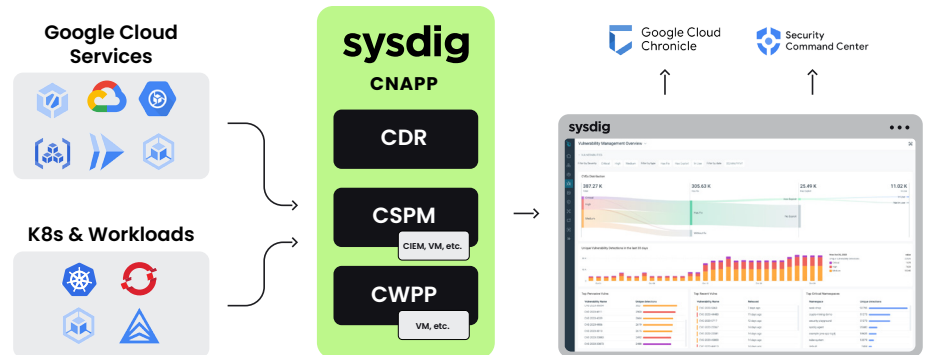

Key Benefits

Cloud detection & response
Stop attacks in cloud environments faster

Vulnerability management
Reduce vulnerabilities by up to 95%

Posture management
Instantly detect risk changes in cloud

Permissions and Entitlements
Gain visibility into cloud identities

Customer Stories

apreehealth

ApreeHealth combines advanced primary care with best-in-class digital engagement, striving to tear down the health industry's data silos and help patients achieve better, more affordable outcomes. With runtime insights, Sysdig empowers them to identify, visualize, and eliminate Kubernetes vulnerabilities, threats, and misconfigurations in real time. Automated evidence gathering and reporting, coupled with out-of-the-box policies for both SOC 2 and HITRUST, ensures that Apree Health is ready for any audit request. Being a Google shop, one of Sysdig's primary selling points was its seamless integration with Google Chronicle. **Learn more.**

BIGCOMMERCE

BigCommerce has a massive Google Cloud presence and its team realized early in its adoption journey that cloud security is quite a bit different. Cloud governance is an indispensable part of that dynamic and has to be closely monitored. This is one of the reasons why Sysdig was chosen at BigCommerce. Sysdig solved BigCommerce's need for end-to-end platform support, real-time threat response, and access to granular, actionable insights in a matter of seconds.
